World-class security
for the expanding
pay-TV universe

Conax Contego™

Conax Contego™ provides the ultimate protection for your content and revenue, now and in the future. Our latest content protection platform is a sophisticated, fully scalable solution that supports any business model for any TV operation and a multitude of consumer devices.

Conax has an unmatched record in protecting content and with Conax Contego™ we are setting the standard even higher. Conax Contego™ includes a highly user-friendly interface and an array of new features. Available in four editions, Conax Contego™ delivers unrivalled security for any operation – from traditional broadcasting to the most advanced viewing experience available.

SECURITY MADE EASY

Security is at the core of everything we do, and we make it user friendly. Conax Contego™ is easy to use, navigate and configure, with an intuitive management system that includes step-by-step wizards, diagnostics, reporting and extensive audit logging.

A comprehensive monitoring system checks the state of the installation and the hardware platform, providing detailed statistics so that potential problems can be detected before they become an issue.

In addition, the unique Conax Contego™ architecture allows you to add any degree of redundancy by using pre-set solutions or by tailoring the settings to your operation's requirements.

ULTIMATE FLEXIBILITY

Conax Contego™ scales horizontally which means that you can easily increase capacity and performance simply by adding hardware as your operation develops and grows.

The open architecture of Conax Contego™ offers easy integration with surrounding systems to enable any business model or distribution technology. It also gives you room to expand your subscriber base or your product range to any level you wish.

In addition, our open policy for consumer devices means there is a wide variety of highly secure broadcast and hybrid STBs and CAMs to choose from. Conax Contego™ also makes it easy to secure connected devices such as computers, smartphones, tablets, games consoles and connected TVs.

AN EDITION TO SUIT YOU

Whatever your size of operation, there's a Conax Contego™ edition to fit. Choose the best option for your requirements from our different editions of Conax Contego™ - Lite, Broadcast, Plus or Unite.

Conax Contego Lite™

Big leagues security for smaller-scale operations

Conax Contego Lite™ is a compact all-in-one server solution for up to 25,000 subscribers and 50 encrypted subscription services and packages. This version of Conax Contego is ideal for start-ups and smaller operations looking for flexibility to add additional functionality in the future.

Lite includes comprehensive support for subscription and pairing and optional support for fingerprinting and messaging functionality. Operators can start with Lite and easily upgrade to other editions as the business grows.

Conax Contego Broadcast™

Total security for one-way operations

Conax Contego Broadcast™ is a world-class solution for classic one way DVB-S/C/T broadcast operations of any size. It is ideal for operators wanting to migrate from analogue to digital TV.

Broadcast includes comprehensive support for subscription, pairing, fingerprinting and messaging, with optional support for DRM control and Pay Per View. Operators who wish to introduce more advanced service offerings such as VOD at a future date can easily upgrade to Plus or Unite when needed.

Conax Contego Plus™

Advanced security features for broadcast and on-demand TV

Conax Contego Plus™ is an advanced solution for pay-TV operators who plan to provide OTT services in the future. In addition to one-way broadcast, it supports two-way interactive business models including on-demand services for cable and IPTV, allowing the operator to offer the subscribers richer viewing options.

In addition to comprehensive support for subscription, pairing, fingerprinting, messaging, DRM control and Pay Per View, Plus also allows centralised CAS, where several operators share both the content management and the service delivery platform to reduce costs and maintenance. There is also optional support for on-demand. Operators can easily upgrade to Plus from either Lite or Broadcast.

Conax Contego Unite™

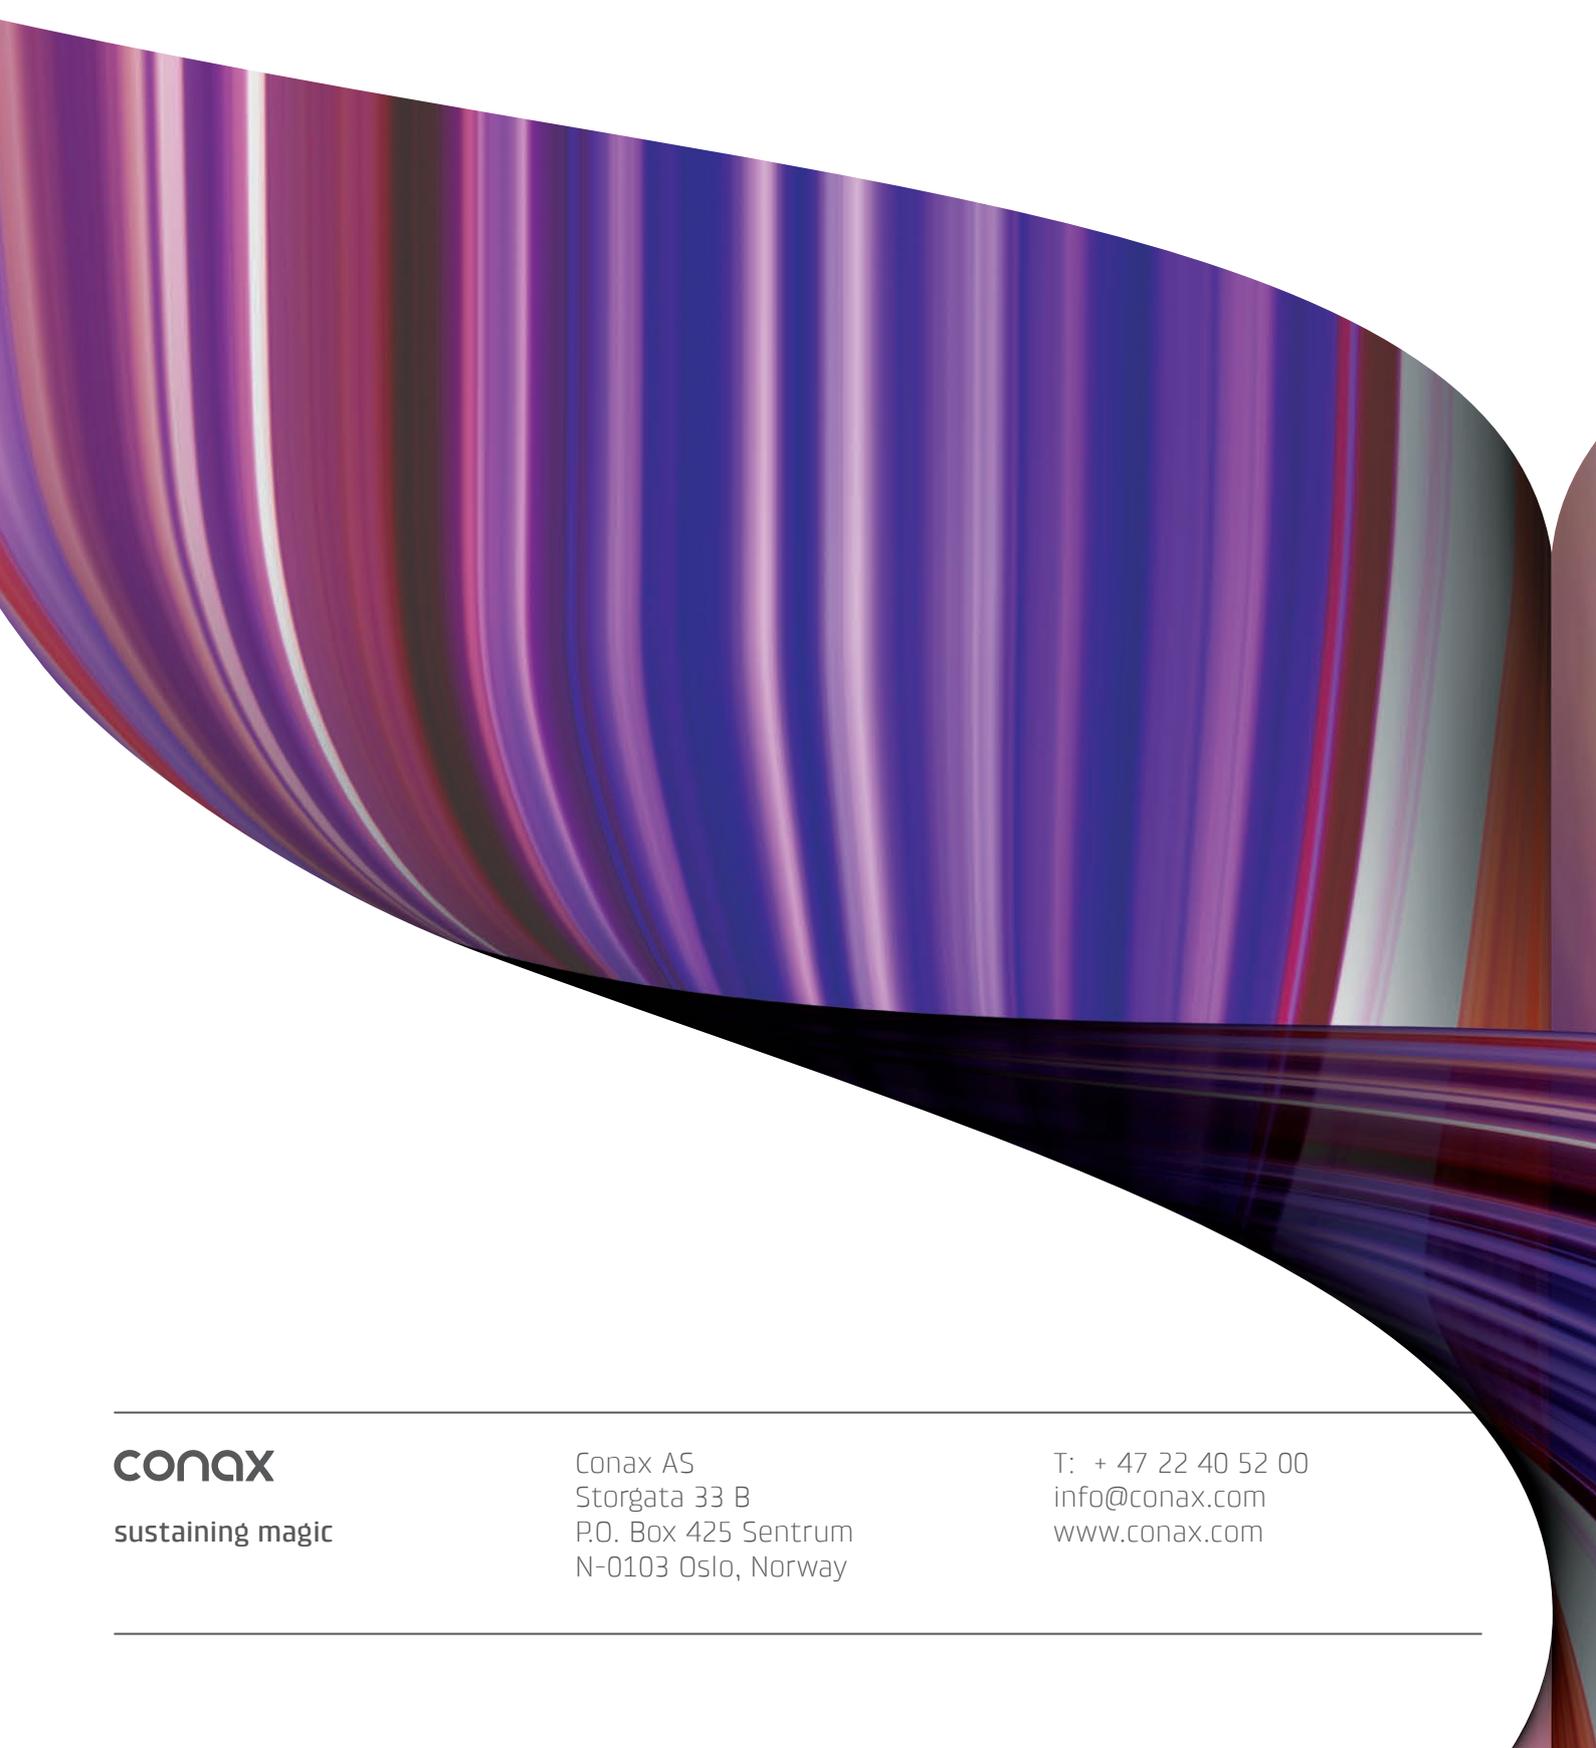

Security across broadcast, broadband and OTT

Conax Contego Unite™ is the most advanced content protection on the market for both broadcast and broadband services on multiple platforms. It allows operators to offer their subscribers a compelling user experience ranging from traditional viewing to true TV Anywhere.

Unite protects content delivery to any consumer device, featuring multi-DRM support to ensure the best-suited security solution for each device. Its advanced technology conceals the complexity of OTT content delivery and allows operators full control over secure content distribution to connected consumer devices.

Unite offers comprehensive support for subscription, pairing, fingerprinting, messaging, DRM control, Pay Per View, centralised CAS and on-demand. There is also optional support for OTT for Microsoft PlayReady.
